

Test Title

This is a sample document, created with the 'SimplePDFBuilder()' class.

This class is an extension of the PyFPDF base class, FPDF().

```
def wrap_text(self, text, orientation="P"):  
    self.set_margins(self.V_MARGIN, self.H_MARGIN)  
    self.add_page(orientation=orientation)  
    self.add_font("courier", "", "Courier_New.ttf", uni=True)  
    self.set_xy(self.V_MARGIN, self.H_MARGIN)  
    self.set_font('courier', '', self.BASE_FONT_SIZE)  
    self.set_text_color(0, 0, 0)
```

So, that appears to have worked out nicely. :D
